

The HTML Accessibility Guide

webofritik

1. Alternative Text

The **alt** attribute provides an alternate text for an image, if the user for some reason cannot view it

because of slow connection, an error in the src attribute, or if the user uses a screen reader.

```

```

2. Create Good Link Text

A link text should explain clearly what information the reader will get by clicking on that link.

For Example:

Good

Buy tickets to mars

Read more about
CSS

Bad

Buy tickets to mars

Click here

3. Use Clear Language

Always use a clear language, that is easy to understand.

For Example:

- Keep sentences as short as possible
- Avoid dashes. Instead of writing 1-3, write 1 to 3
- Avoid abbreviations. Instead of writing **Feb**, write **February**
- Avoid **slang** words

4. Headings Are Important

Headings are defined with the **<h1>** to **<h6>** tags

<h1> headings should be used for main headings, followed by **<h2>** headings, then the less important **<h3>**, and so on.

Note: Use HTML headings for headings only. Don't use headings to make text **BIG** or **bold**.

5. Semantic HTML

Semantic HTML means using **correct** HTML elements for their correct purpose as much as possible.

For Example:

Semantic

```
<button>Click Me</button>
```

Non-semantic

```
<div>Click Me</div>
```
