

10 DAYS OF

HTML

LEARNING SERIES

Learn Today,
Build Tomorrow,
Inspire Forever!

From Basics to Build - One Tag at a Time!

WHAT YOU'LL LEARN:

- ✓ HTML Basics
- ✓ Tags & Elements
- ✓ Links, Images & Paths
- ✓ Lists, Tables & Comments
- ✓ Forms & Input Elements
- ✓ Semantic HTML
- ✓ Audio, Video & Embedding
- ✓ Attributes & Meta Tags
- ✓ Mini Webpage Project
- ✓ Complete Revision & Interview Questions

```
<!-->
<!DOCTYPE html>
<html lang="en">
<head>
  <meta charset="UTF-8">
  <meta name="viewport"
    content="width=device-width,
    initial-scale=1.0">
  <title>My First Website</title>
</head>
<body>
  <h1>Welcome to My Journey 🚀</h1>
  <p>Learning HTML step by step,
    building a better future!</p>
</body>
</html>
```

Why HTML?

- ✓ Foundation of every website
- ✓ Easy to learn
- ✓ Powerful & versatile
- ✓ In-Demand Skill

Small Steps Today,
Amazing Websites Tomorrow! ❤️

★ 10 Days. 10 Topics. 100% Growth. Let's Code the Future!

DAY 1

Let's Build Something Amazing!

Introduction to

HTML

& Basic Structure

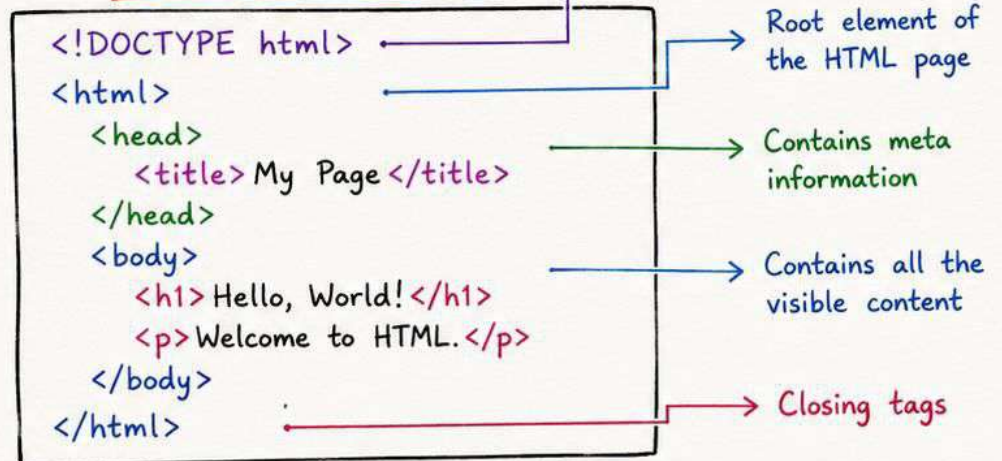

What is HTML?

- HTML stands for HyperText Markup Language.
- It is the standard markup language used to create web pages.

Key Points

- ★ HTML describes the structure of a web page.
- ★ HTML elements are the building blocks.
- ★ HTML is not case sensitive.
- ★ HTML works with CSS and JavaScript.

Basic Structure of an HTML Document

Why HTML?

- ✓ Easy to learn
- ✓ Foundation of web development
- ✓ Used everywhere!

HTML is the skeleton of a web page.

We style it with CSS and make it interactive with JavaScript.

Every Expert Was Once a Beginner.

Keep Learning, Keep Building!

DAY 2

Headings, Paragraphs & Text Formatting

Small Tags,
Big Impact!

1. HEADINGS

Headings are used to define important titles.

- <h1> → Heading 1
- <h2> → Heading 2
- <h3> → Heading 3
- <h4> → Heading 4
- <h5> → Heading 5
- <h6> → Heading 6

★ Use one <h1> per page for best SEO & structure.

2. PARAGRAPHS

Paragraphs are used to write blocks of text.

<p>

This is a paragraph.
It contains some text about HTML.
Paragraphs help to organize content in a web page.

</p>

Browsers add space before and after a paragraph automatically.

3. TEXT FORMATTING

Use tags to format text and make it meaningful.

- → **Bold Text**
- → **Strong Text**
- <i> → *Italic Text*
- → *Emphasized Text*
- <u> → Underlined Text
- <mark> → **Marked Text**
- <small> → Small Text
- → ~~Deleted Text~~
- <ins> → Inserted Text

EXAMPLE

```
<h1>Welcome to LearnMora Ai</h1>
<h2>HTML is Awesome!</h2>
<p>This is a <b>simple</b> paragraph with
  <i>italic</i>, <u>underline</u> and <mark>highlight</mark> text.</p>
```

KEY TAKEAWAY

- ✓ Use headings for structure.
- ✓ Use paragraphs for content.
- ✓ Use formatting tags to emphasize text.
- ✓ Well formatted text = Better Readability!

★ Good Structure + Good Formatting = Great Web Page!

DAY 3

Links, Images & File Paths

Link it.
Show it.
Build it!

1. LINKS

The `<a>` tag is used to create hyperlinks.

```
<a href="https://learnmoraai.com">
  Visit LearnMora Ai
</a>
```

Types of Links:

- External Link
`<a href="https://example.com">`
- Internal Link (Same Website)
`<a href="about.html">About Us</a>`
- Email Link
`<a href="mailto:hello@learnmoraai.com">Email Us</a>`
- Phone Link
`<a href="tel:+1234567890">Call Us</a>`

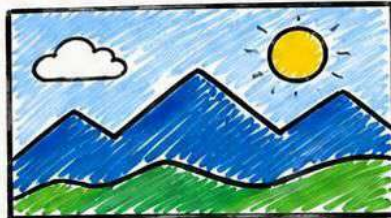

Links make your web pages interactive and connected!

2. IMAGES

The `<img>` tag is used to display images.

```

```

Common Attributes:

- src → Image source
- alt → Alternative text (for accessibility & SEO)
- width → Set width
- height → Set height

Always use alt text for better accessibility and SEO!

3. FILE PATHS

File paths help the browser find files in the right location.

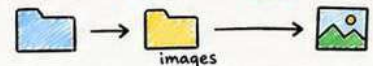

1. Same Folder

`src="image.jpg"`

2. Sub Folder

`src="images/photo.jpg"`

3. Parent Folder

`src="../photo.jpg"`

4. Absolute Path (Full URL)

`src="https://example.com/img/logo.png"`

File Path Tips:

- ✓ Be case-sensitive
- ✓ Use / (forward slash)
- ✓ Keep your folder structure organized

★ Good Links, Clear Images & Correct Paths = Better User Experience!

DAY 4

Lists, Tables & Comments

Organize it.
Structure it.
Code it!

1. LISTS

HTML provides 3 types of lists.

- Unordered List (ul)

Used for bullet points.

```
<ul>
  <li>HTML</li>
  <li>CSS</li>
  <li>JavaScript</li>
</ul>
```

- HTML
- CSS
- JavaScript

- Ordered List (ol)

Used for numbered items.

```
<ol>
  <li>Step 1</li>
  <li>Step 2</li>
  <li>Step 3</li>
</ol>
```

1. Step 1
2. Step 2
3. Step 3

- Description List (dl)

Used for terms and descriptions.

```
<dl>
  <dt>HTML</dt>
  <dd>HyperText Markup Language</dd>
  <dt>CSS</dt>
  <dd>Cascading Style Sheets</dd>
</dl>
```

- HTML
HyperText Markup Language
- CSS
Cascading Style Sheets

Use lists to organize content in a clean and readable way!

2. TABLES

Tables are used to display data in rows and columns.

```
<table border="1">
  <tr>
    <th>Name</th>
    <th>Age</th>
    <th>City</th>
  </tr>
  <tr>
    <td>Alice</td>
    <td>20</td>
    <td>New York</td>
  </tr>
  <tr>
    <td>Bob</td>
    <td>22</td>
    <td>London</td>
  </tr>
</table>
```

Table Elements:

- **<table>** → Table container
- **<tr>** → Table row
- **<th>** → Table header (bold)
- **<td>** → Table data (cell)

Output:

Name	Age	City
Alice	20	New York
Bob	22	London

3. COMMENTS

Comments are used to add notes in the code. They are not displayed in the browser.

```
<!-- This is a comment -->
<p>Hello World!</p>
<!-- This is another comment -->
```

Why Use Comments?

- ✓ Add notes for yourself
- ✓ Explain code to others
- ✓ Hide temporary code
- ✓ Improve code readability

PRO TIP

Good comments today
= Easy code tomorrow!

Lists help in grouping,
Tables help in displaying data,
Comments help in understanding.

Together, they make your HTML strong and professional!

Keep Practicing,
Keep Building!

DAY 5

Forms & Input Elements

Take Input.
Send Data.
Build Magic! ✨

1. WHAT IS A FORM?

A form is used to collect user input and send it to a server for processing.

```
<form action="/submit" method="post">
  <!-- form elements -->
</form>
```

- action → Where to send the data
- method → How to send the data (get / post)

4. EXAMPLE FORM

Name:

Email:

Age:

Gender: ☐ Male ☒ Female

Course:

Message:

☒ I agree to the terms & conditions

2. INPUT ELEMENTS

Different types of input elements are used to take user input.

Text →

Password →

Email →

Number →

Date →

Checkbox → ☒ I agree

Radio → ☒ Male ☐ Female

File → No file chosen

Submit →

Reset →

Button →

5. KEY POINTS

- ✓ Forms collect user input.
- ✓ Use the right input type for better user experience.
- ✓ Always use <label> for accessibility.
- ✓ Choose the correct method: GET or POST.
- ✓ Validate data on both client side & server side.

3. OTHER FORM ELEMENTS

- <label> → Defines a label for an input element.

```
<label for="name">Name:</label>
<input type="text" id="name">
```

- <textarea> → Multi-line input.

```
<textarea rows="4" cols="30"
placeholder="Your message..."></textarea>
```

- <select> & <option> → Dropdown list.

```
<select name="city">
  <option value="ny">New York</option>
  <option value="ldn">London</option>
  <option value="tk">Tokyo</option>
</select>
```

6. PRO TIP

Good forms =

- ✓ Clear labels
- ✓ Right input types
- ✓ Helpful placeholders
- ✓ Easy to use
- ✓ Mobile friendly

★ Well designed forms lead to better data & better user experience! 😊

DAY 6

Semantic HTML Tags

Write Meaningful
HTML.
Build **Better**
Websites!

1. WHAT IS SEMANTIC HTML?

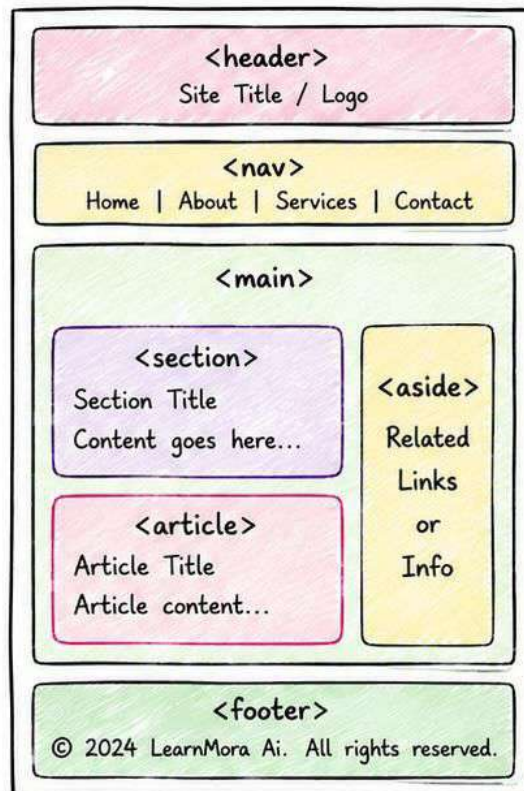

Semantic HTML uses meaningful tags that clearly describe the purpose of the content.

2. COMMON SEMANTIC TAGS

- `<header>` → Intro or top section of a page
- `<nav>` → Navigation links
- `<main>` → Main content of the page
- `<section>` → A section in the document
- `<article>` → Independent, self-contained content
- `<aside>` → Sidebar or related content
- `<footer>` → Footer of the page

3. PAGE STRUCTURE EXAMPLE

Using Semantic HTML

4. BENEFITS

- ✓ Improves readability of code
- ✓ Better for SEO
- ✓ Helps screen readers & accessibility
- ✓ Makes websites easier to maintain
- ✓ Clearly defines different parts of a page

5. EXAMPLE COMPARISON

✗ Non-Semantic

```

<div id="header">...</div>
<div id="menu">...</div>
<div id="content">...</div>
<div id="footer">...</div>
  
```

✓ Semantic

```

<header>...</header>
<nav>...</nav>
<main>...</main>
<footer>...</footer>
  
```

6. KEY TAKEAWAY

Semantic HTML makes your code meaningful, accessible, SEO-friendly, and easy to manage.

Good Structure. Meaningful Code.
Better Websites.

Semantic today, Smarter tomorrow!

Code with meaning, Create with impact!

DAY 7

Audio, Video & Embedding Content

Embed it.
Play it.
Engage it!

1. AUDIO IN HTML

Use `<audio>` tag to add sound to your web pages.

```
<audio controls>
  <source src="audio.mp3" type="audio/mpeg">
  <source src="audio.ogg" type="audio/ogg">
  Your browser does not support the audio tag.
</audio>
```

Attributes:

- `controls` → Show play, pause, volume controls
- `autoplay` → Start audio automatically
- `loop` → Repeat the audio
- `muted` → Start audio muted

2. VIDEO IN HTML

Use `<video>` tag to add videos.

```
<video width="500" controls poster="thumb.jpg">
  <source src="video.mp4" type="video/mp4">
  <source src="video.webm" type="video/webm">
  <track src="captions.vtt" kind="subtitles"
    srclang="en" label="English">
  Your browser does not support the video tag.
</video>
```

Attributes:

- `controls` → Show video controls
- `autoplay` → Play video automatically
- `loop` → Loop the video
- `muted` → Start video muted
- `poster="image.jpg"` → Show thumbnail before play
- `width / height` → Set video size

3. EMBEDDING CONTENT

Use `<iframe>` tag to embed external content like maps, videos, websites, etc.

```
<iframe src="https://www.youtube.com/embed/VIDEO_ID"
  width="560" height="315" title="YouTube video"
  frameborder="0"
  allow="accelerometer; autoplay; clipboard-write;
  encrypted-media; gyroscope; picture-in-picture"
  allowfullscreen>
</iframe>
```

Common Uses:

- ✓ Embed YouTube videos
- ✓ Embed Google Maps
- ✓ Embed external websites
- ✓ Display documents (PDF, etc.)

5. SUPPORTED FORMATS

Type	Formats
Audio	MP3, OGG, WAV
Video	MP4, WebM, OGG
Subtitles	VTT
Documents	PDF (via iframe)

Always provide multiple formats for better browser compatibility!

4. OTHER EMBEDDING OPTIONS

- Embed Google Map

```
<iframe src="https://www.google.com/maps/embed?pb=..."
  width="600" height="450"
  style="border:0;" allowfullscreen=""
  loading="lazy"></iframe>
```

- Embed PDF Document

```
<iframe src="file.pdf" width="100%" height="600px">
  Your browser does not support PDFs.
</iframe>
```

- Embed Social Media (Twitter Post)

```
<blockquote class="twitter-tweet"><p>... </p>&mdash;
  User (@user) <a href="...">Date</a></blockquote>
<script async src="https://platform.twitter.com/widgets.js"
  charset="utf-8"></script>
```

6. KEY TAKEAWAYS

- ✓ Use `<audio>` for sound and `<video>` for videos.
- ✓ Use `<source>` for multiple format support.
- ✓ Use `<track>` to add subtitles to videos.
- ✓ Use `<iframe>` to embed external content.
- ✓ Always consider user experience and compatibility.

Rich Media. Better Engagement. Stronger Websites!

DAY 8

HTML Attributes & Meta Tags

Small details
make a **big**
difference!

1. HTML ATTRIBUTES

Attributes provide additional information about HTML elements.

Example:

```
<a href="https://learnmoraai.com"
  target="_blank" title="Learn Mora Ai">
  Visit LearnMora Ai</a>
```

Common Attributes:

Attribute	Description
id	Unique identifier for an element
class	Specifies one or more class names
style	Adds inline CSS styles
title	Provides extra info (tooltip)
href	Specifies the URL for a link
src	Specifies the source of media
alt	Provides alternative text for images
target	Specifies where to open the link
width	Sets the width of an element
height	Sets the height of an element

Tips:

- ✓ Use meaningful id and class names.
- ✓ Add alt text for accessibility.
- ✓ Use target="_blank" for external links.

2. META TAGS

Meta tags provide metadata about the HTML document.

Where to use?

Inside the <head> section.

```
<head>
  <meta charset="UTF-8">
  <meta name="viewport"
    content="width=device-width,
    initial-scale=1.0">
  <meta name="description"
    content="Learn HTML with
    LearnMora Ai">
  <meta name="keywords"
    content="HTML, Web Development,
    LearnMora Ai">
  <meta name="author"
    content="LearnMora Ai">
</head>
```

Common Meta Tags:

- ◆ charset Defines the character encoding
- ◆ viewport Ensures proper display on all devices
- ◆ description Describes the page content (Used in SEO)
- ◆ keywords Defines keywords for search engines (Less important now)
- ◆ author Specifies the author of the page
- ◆ robots Controls search engine indexing

Example:

```
<meta name="robots" content="index, follow">
```

3. OTHER IMPORTANT META TAGS

- Open Graph (For Social Sharing)

```
<meta property="og:title" content="Learn HTML">
<meta property="og:description"
  content="Best HTML Guide for Beginners">
```

- Favicon (Website Icon)

```
<link rel="icon" href="favicon.ico">
```

- Refresh (Auto Refresh Page)

```
<meta http-equiv="refresh" content="5">
```

4. KEY TAKEAWAYS

- ✓ Attributes add extra information to HTML elements.
- ✓ Use id for unique identification and class for grouping.
- ✓ Meta tags provide important information to browsers and search engines.
- ✓ Good use of attributes and meta tags improves SEO, accessibility and user experience.

Pro Tip

Always write clean, meaningful code. It helps you & others understand your work easily!

Smart Attributes. Powerful Meta Tags. Better Websites!

DAY 9

Mini Webpage Project

Build Today,
Show Tomorrow,
Inspire Forever!

★ Let's build a **simple webpage** using everything we've learned so far! 🎉

1. PROJECT GOAL

Create a simple **personal profile** webpage.

2. WHAT WE'LL USE

- ✓ Headings & Paragraphs
- ✓ Links & Images
- ✓ Lists
- ✓ Table
- ✓ Forms
- ✓ Semantic Tags
- ✓ Attributes & Meta Tags

3. PAGE SECTIONS

- ① Header (Logo + Navigation)
- ② About Me
- ③ Skills (List)
- ④ Projects (Table)
- ⑤ Contact Me (Form)
- ⑥ Footer (Social Links)

4. PROJECT PREVIEW

My Portfolio

Home About Skills Projects Contact

Hi, I'm Alex 🙋

Web Developer

I love creating clean and responsive websites. Welcome to my mini portfolio!

Contact Me

About Me

I am a passionate learner who loves coding and building practical projects.

Skills

- HTML
- CSS
- JavaScript
- Problem Solving

Projects

Project	Description	Tech Used	Link
Portfolio Website	My personal portfolio	HTML, CSS	View
To-Do List	A simple task app	HTML, CSS, JS	View
Landing Page	A product landing page	HTML, CSS	View

5. HTML STRUCTURE (EXAMPLE)

```

<!DOCTYPE html>
<html lang="en">
<head>
  <meta charset="UTF-8">
  <meta name="viewport"
    content="width=device-width,
    initial-scale=1.0">
  <title>My Portfolio</title>
</head>
<body>
  <header>...</header>
  <main>
    <section id="about">...</section>
    <section id="skills">...</section>
    <section id="projects">...</section>
    <section id="contact">...</section>
  </main>
  <footer>...</footer>
</body>
</html>
  
```

6. KEY TAKEAWAYS

- ✓ We used semantic HTML for structure.
- ✓ We added content like text, images, lists, table & forms.
- ✓ We used attributes & meta tags.
- ✓ This is the foundation of every website!

7. CHALLENGE FOR YOU

Add your own styles using CSS and make this webpage look amazing!

★ PRO TIP ★ Practice + Creativity =
Awesome Websites!

Small Project Today, **Big Developer Tomorrow!**

DAY 10

Complete HTML Revision & Interview Questions

Revise Today,
Crush Tomorrow!
You've Got This!

1. HTML TOPICS - QUICK REVISION

- T** 1. Headings & Paragraphs
<h1> to <h6>, <p>
-  2. Links, Images & File Paths
<a>, , absolute & relative paths
-  3. Lists, Tables & Comments
, , , <table>, <!-- comments -->
-  4. Forms & Inputs
<form>, <input>, <label>, <textarea>, <button>
-  5. Semantic HTML
<header>, <nav>, <main>, <section>, <article>, <footer>
-  6. Audio, Video & Embedding
<audio>, <video>, <iframe>, embed maps, PDFs, etc.
-  7. Attributes & Meta Tags
id, class, src, href, alt, <meta> tags for SEO & responsiveness
-  8. Mini Project
Build a complete webpage using all concepts

4. BEST PRACTICES

- ★ Use semantic tags for better structure.
- ★ Always add alt text to images.
- ★ Write meaningful titles and meta descriptions.
- ★ Keep code clean and well-indented.
- ★ Test your webpage in different browsers.
- ★ Optimize for mobile & accessibility.

2. IMPORTANT HTML TAGS

Tag	Purpose
<html>	Root element of HTML document
<head>	Contains meta information
<title>	Title of the webpage
<body>	Visible content of the webpage
<h1> to <h6>	Headings
<p>	Paragraph
<a>	Link
	Image
, ,	Lists
<table>	Table
<form>	Form container
<input>	Input field
<button>	Clickable button
<label>	Label for input
<div>	Block level container
	Inline container
<meta>	Metadata about page
<iframe>	Embed external content

5. MINI CHECKLIST

- ✓ Used all HTML elements
- ✓ Added forms, tables & lists
- ✓ Used semantic tags
- ✓ Added meta tags
- ✓ Tested links, images, and media
- ✓ Built a complete mini webpage

3. INTERVIEW QUESTIONS

- ① What is HTML?
HTML (HyperText Markup Language) is used to structure content on the web.
- ② What is the difference between <div> and ?
<div> is block-level, is inline.
- ③ What are semantic HTML tags?
Tags that clearly describe their meaning like <header>, <nav>, <article>, etc.
- ④ What is the use of meta tags?
Meta tags provide metadata about the HTML document (SEO, viewport, description, etc.).
- ⑤ How do you create a link in HTML?
Use the <a> tag with the href attribute.
- ⑥ What is the difference between and ?
 is an ordered list (numbers), is an unordered list (bullets).
- ⑦ How do you embed a video?
Use the <video> tag with src attribute.
- ⑧ What is the use of alt attribute?
It provides alternative text for an image (accessibility & SEO).
- ⑨ How do you create a form in HTML?
Use the <form> tag with input elements like <input>, <textarea>, <button>.
- ⑩ What are HTML attributes?
Attributes provide additional information about HTML elements.

6. FINAL TIP

Consistent practice + Smart revision
= Confident **YOU!**
Keep building, keep learning
and keep growing!

You've Learned a Lot! Keep Practicing, Keep Building, Keep Shining!
