

Azure Interview Q&A

<< Swipe Left <<

1) What is Microsoft Azure?

Microsoft Azure is a cloud computing platform offering a range of services, including computing, analytics, storage, and networking

2) What are the key services offered by Azure?

Key services include Azure Virtual Machines, Azure App Services, Azure SQL Database, Azure Blob Storage, Azure Functions, and Azure Kubernetes Service (AKS).

3) What is Azure Resource Manager (ARM)?

Azure Resource Manager is a deployment and management service that enables users to create, update, and delete resources in Azure.

4) What is a subscription in Azure?

A subscription is an agreement with Microsoft to use one or more Azure services. It provides access to Azure resources and a way to manage billing.

5) What is Azure Blob Storage?

Azure Blob Storage is a service for storing large amounts of unstructured data, such as text or binary data. It is optimized for storing documents, images, and backup data.

<< Swipe Left <<

6) What is Azure Cosmos DB?

Azure Cosmos DB is a globally distributed, multi-model database service designed for high availability and low latency.

7) What is Azure Virtual Network (VNet)?

Azure Virtual Network is a logical isolation of the Azure cloud dedicated to your subscription.

8) What is Azure ExpressRoute?

Azure ExpressRoute is a service that enables you to create private connections between Azure data centers and your on-premises infrastructure or colocation environment.

9) What is Azure Active Directory (AD)?

Azure Active Directory is a cloud-based identity and access management service that helps employees sign in and access resources, providing single sign-on and multifactor authentication.

10) How does Azure Key Vault work?

Azure Key Vault is a cloud service that stores and manages cryptographic keys, secrets, and certificates securely.

<< Swipe Left <<

11) What is Azure DevOps?

Azure DevOps is a suite of development tools for software development and project management, providing CI/ CD capabilities, source control, and project tracking.

12) What are Azure Functions?

Azure Functions is a serverless compute service that allows you to run code on-demand without managing infrastructure. It is event-driven and can scale automatically based on demand.

13) What is Azure Monitor?

Azure Monitor is a service that provides a comprehensive solution for collecting, analyzing, and acting on telemetry data from your cloud and on-premises environments.

14) What is Azure Application Insights?

Azure Application Insights is an application performance management service that helps you monitor your applications, detect issues, and understand usage patterns.

15) What is Azure Kubernetes Service (AKS)?

AKS is a managed Kubernetes container orchestration service that simplifies deploying, managing, and scaling containerized applications using Kubernetes.

<< Swipe Left <<

16) What is the Resource Manager?

An Azure Resource Manager template is a JSON file that defines the infrastructure and configuration for your Azure solution.

17) What are Azure Scale Sets?

Azure Virtual Machine Scale Sets allow you to deploy and manage a set of identical, auto-scaling virtual machines.

18) What is Azure Load Balancer?

Azure Load Balancer distributes network traffic across multiple servers, ensuring high availability and reliability by preventing any single server from becoming a bottleneck.

19) How is Azure pricing determined?

Azure pricing is based on a pay-as-you-go model, with costs determined by usage metrics such as compute hours, storage, and network bandwidth.

20) What is the Azure Pricing Calculator?

The Azure Pricing Calculator is a tool that allows users to estimate the cost of Azure services based on their planned usage, helping to forecast budget requirements.

<< Swipe Left <<

21) What are Azure Roles?

Azure Roles are a set of permissions that define what actions can be performed on Azure resources. Common roles include Owner, Contributor, and Reader.

22) What is Azure Policy?

Azure Policy is a service that allows you to create, assign, and manage policies to enforce rules over your resources, helping ensure compliance with corporate standards.

23) What is Azure Logic Apps?

Azure Logic Apps is a cloud service that helps automate workflows and integrate apps, data, and services across organizations without writing code.

24) What is Azure Service Bus?

Azure Service Bus is a messaging service that allows applications to communicate with each other in a decoupled way.

25) What is Azure Backup?

Azure Backup is a service that provides reliable and secure backup for Azure and on-premises workloads, ensuring data protection and recovery.

<< Swipe Left <<

26) What is Azure Site Recovery?

Azure Site Recovery is a disaster recovery service that ensures business continuity by enabling the replication, failover, and recovery of virtual machines and applications.

27) What is Azure Machine Learning?

Azure Machine Learning is a cloud-based environment for training, deploying, and managing machine learning models at scale.

28) What are Azure Cognitive Services?

Azure Cognitive Services are a set of APIs and services that enable developers to add intelligent features such as vision, speech, language.

29) What is Azure Container Instances (ACI)?

Azure Container Instances is a service that allows you to run containers on Azure without managing the underlying infrastructure,

30) What is Azure App Service?

Azure App Service is a platform for building, deploying, and scaling web apps and APIs quickly and easily, offering built-in tools for continuous integration and deployment.

<< Swipe Left <<

31) What is Azure Monitor?

Azure Monitor provides comprehensive monitoring and diagnostics for Azure applications and resources, including metrics and logs.

32) What is serverless computing in Azure?

Serverless computing allows developers to build applications without managing the underlying infrastructure, using services like Azure Functions and Logic Apps.

33) What is Azure Service Fabric?

Azure Service Fabric is a distributed systems platform for building and managing scalable and reliable microservices.

34) What is Azure API Management?

API Management is a service that enables you to create, publish, secure, and analyze APIs in Azure.

35) What are Azure Blueprints?

Azure Blueprints allow you to define and manage a set of Azure resources and their configurations as a single entity, streamlining the deployment process.

<< Swipe Left <<

36) What is Azure Disk Storage?

Azure Disk Storage provides high-performance and durable block storage for Azure VMs.

37) What is Azure ExpressRoute?

ExpressRoute is a service that provides a private connection between Azure data centers and on-premises or colocation environments.

38) What is Azure Database for MySQL?

It is a managed MySQL database service that provides built-in high availability, scalability, and security.

39) What is Azure Redis Cache?

Azure Redis Cache is a fully managed, in-memory cache that improves application performance by reducing data retrieval times.

40) What is Azure Key Vault?

Azure Key Vault is a service for securely storing and managing sensitive information like keys, secrets, and certificates.
